

## **Saving Energy Protects our Air, Water, & Soil!**

Generating electricity creates pollution,  
which negatively impacts our health and the environment.

**You can help by becoming an energy Super Saver!**

### **MANAGE TEMPERATURE**

- Set your thermostat at a maximum of 68F in the winter and a minimum of 78F in the summer
- Use fans in the summer to supplement your air conditioning - fans use less energy than air conditioning
- Choose window coverings that provide insulation
- Use caulk or weather stripping to seal gaps around windows and doors
- Use a programmable thermostat

### **USE ELECTRONICS EFFICIENTLY**

- Turn off or unplug small appliances and electronics when not in use
- Turn down brightness and use energy-saving features
- Use computer sleep modes

### **REDUCE USE OF HEATED WATER**

- Take shorter showers
- Wash clothes in cold water and only run full loads
- Install energy-saving showerheads, faucets or flow restrictors
